Team Wilderness

CIS497 Senior Project – Spring 2018

University of South Alabama

Client: Anna Bryant, Park Manager
Meaher State Park

Project Description

Meaher State Park currently takes RV slot reservations by phone, then handwritten down by staff. The application we are developing will allow staff members to record customer data and reservations, as well as to search customers and reservations from a database. These features, alongside other added conveniences, will both save time and increase productivity for park staff.
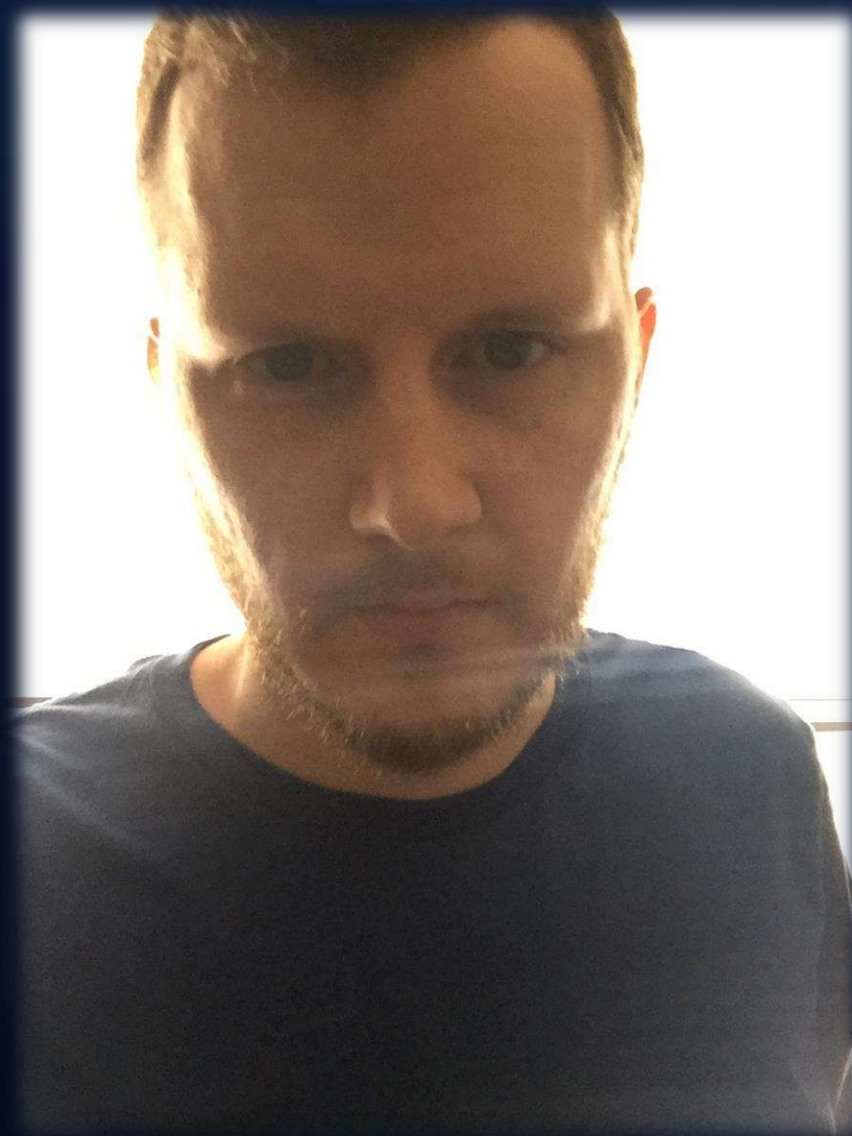

Suketu Patel

Major - Information Systems

Hello, I'm Suketu Patel. I am an Information Systems major with a background in healthcare. I currently work at a local hospital as a Nuclear Medicine Supervisor and look forward to transitioning into the tech field.

My biggest interest is aviation and I am currently a student pilot in my free time.

Jason Purcell

Major - Computer Science

Hi, I'm Jason Purcell, computer science major, nocturnal by force, and spent eternity going to college. And yes, I'm older than I look. My inspiration to become a computer scientist resonated from growing up in the 90's when the Internet started and when computers evolved(Ctrl+Alt+Delete era).

In my free time, music is my life-I'm a big Alternative/Indie rock guy. I am currently collecting vinyl records to break away from the digital format. In the summertime, you can find me at the beach and/or creek.

Joshua Smith

Major - Information Systems

Hello, I'm Joshua Smith, an Information Systems major. My interest in this field is a result of wanting to learn more about the technology that makes both business and daily life more and more convenient all the time. To learn more about the hardware side of that curiosity, I've previously earned an Associate degree in Electronics Engineering.

My hobbies include music, reading, gaming, PC building and traveling.

Joshua Wright

Major – Computer Science

Hey my name is Joshua Wright. I'm a computer science major. I became interested in computer science at a young age when I started teaching myself to make games. I found out that I liked creating all sorts of things and solving problems and the rest is history.

In my free time I like to read, make music, and play and make games.
